

REVISED SUPPLEMENT

Summary of 2010-2011 Citrus Budget for the Central Florida (Ridge) Production Region

Ronald P. Muraro, Extension Economist
University of Florida, IFAS, CREC, Lake Alfred, FL

Citrus budgets are tabulated annually for the Central, Southwest and Indian River citrus production regions of Florida. The attached budget costs are for the Central Florida (Ridge) citrus production region. These costs may not represent your particular grove situation. However, they represent the most current comparative cost estimates for Florida citrus. The budget costs items for the **Central Florida (Ridge)** are more representative of a **custom managed operation**.

Budget analysis provides the basis for many grower decisions. Budgets can be used to calculate potential profits, determine cash requirements and determine break-even prices. The budget costs presented will serve as a format for growers to analyze their own individual records. The cost data were developed by surveying custom operators, suppliers, growers, colleagues with UF/IFAS and County Extension Agents in each production region.

This **revised** 2010-2011 comparative budget is for a processed orange cultural program. The costs presented are the same as those shown in the September 2011 summary Central Florida budgets but are consolidated into a more friendly reader format. There are two scenarios presented for the budget costs: 1) **Traditional HLB Management Program** and 2) **Cultural Program With an Enhanced Foliar Nutrient Program**. Scenario one represents costs of traditional HLB grove practices which include HLB scouting and removal of symptomatic trees but does not include an enhanced foliar nutrient program. Scenario two is the same cultural program for scenario one without HLB scouting and removal of symptomatic trees but includes the costs of an enhanced foliar nutrient program that most growers are now using to maintain and improve the health and yield of their citrus trees. Each budget scenario shows a Total Cost Per Acre **without** and **with resetting-tree replacement**.

The comparative budget costs are shown as an expanded “**total grower costs**” format in Table 2 and are presented **with** and **without** an enhanced foliar nutrient program as well as no resetting and resetting. The total grower costs include cultural/production, management, regulatory and a charge on the initial investment costs. The costs are presented on a per acre unit basis.

Break-even prices for processed Valencia oranges are shown in Table 3 for yields ranging from 250 to 600 boxes per acre and for the 2010-11 state average yield of 287 boxes per acre. Under a traditional HLB management program and **without** the enhanced foliar nutrient program and **no resetting**, the delivered-in break-even price ranged from \$1.54 to \$0.89 per pound solids and at the state average yield \$1.39 per pound solids; **with resetting** the break-even prices ranged from \$1.65 to \$0.93 per pound solids and at the state average yield \$1.49 per pound solids. Under a no HLB scouting and symptomatic tree removal program but **with** an enhanced foliar nutrient program and **no resetting**, the delivered-in break-even prices ranged from \$1.66 to \$0.94 per pound solids and at the state average yield \$1.50 per pound solids; **with resetting** these break-even prices ranged from \$1.72 to \$0.96 per pounds solids and at the state average yield \$1.55 per pound solids.
