

Your email migration is scheduled to complete the morning of June 16th.
See the “What do you need to do?” section for what to expect.

Announcing GatorMail

Cloud-hosted email in Office 365/Exchange Online

GatorMail is rolling out to the University of Florida for all faculty and staff – joining our students in one email service.

This tool gives you

- 100GB of email storage – 4 times increase
- Modern web interface for a more fluid experience
- Faster, more accurate search capability
- Linked attachments for seamless co-authoring – no more “Who has the newest version?”
- Better integration with other cloud services such as Teams and OneDrive

What do you need to do?

We are working to make this a seamless migration, but here is what to expect:

- If you are using Outlook on the desktop (Mac or Windows)
Outlook may ask you to restart the program. If prompted to login, enter your GatorLink@ufl.edu account and password.
- Webmail link is changing. After migration you will use: <https://outlook.com/ufl.edu>
If prompted to login, enter your GatorLink@ufl.edu account and password.
- For Mobile devices
We recommend installing [Outlook mobile](#) for the best experience and compatibility.
If you choose to use another mobile email app, you will need to delete and re-add your email account on your device after your email migration is complete.

The [UF Mail Documentation site](#) has detailed instructions on [configuring your email client](#) and information on the [migration experience with your existing email program](#).
